November 2019
CAUTIONARY STATEMENT

Forward-looking information

Certain of the statements made and contained herein and elsewhere constitute forward-looking statements as defined in applicable securities laws. Generally, these forward-looking statements can be identified by the use of forward-looking terminology such as "expects", "anticipates", "believes", "intends", "estimates", "potential", "possible" and similar expressions, or statements that events, conditions or results "will", "may", "could" or "should" occur or be achieved.

Forward-looking statements are based on the opinions and estimates of management as of the date such statements are made, and they are subject to a number of known and unknown risks, uncertainties and other factors which may cause the actual results, performance or achievements of the Company to be materially different from any future results, performance or achievement expressed or implied by such forward-looking statements. The Company believes that expectations reflected in this forward-looking information are reasonable but no assurance can be given that these expectations will prove to be accurate and such forward-looking information included herein should not be unduly relied upon.

In particular, this release may contain forward looking information pertaining to the following: potential to expand the life of mine; updated resource and reserves for the Karowe Mine, including the Underground and the total expected life of mine production; estimates of the Company's production and sales volumes for the Karowe Mine, including the Underground and associated cash flow and revenues; estimates of the economic benefits of the Underground, including the payback period; pre-production capital costs for the Underground and the quantum required, and availability of, external financing; anticipated operating margins for the Underground operations; the ability to integrate the underground operations seamlessly into the existing infrastructure; the anticipated mine plan and mining methods; the schedule of development of the underground, production profile and anticipated changes in diamond pricing, including trends in supplies and demands and the potential for stability in the diamond market and diamond pricing; changes to foreign currency exchange rate; the timing and ability of management to further commercialize the Clara digital sales platform and other forward looking information.

There can be no assurance that such forward looking statements will prove to be accurate, as the Company's results and future events could differ materially from those anticipated in this forward-looking information as a result of those factors discussed in or referred to under the heading "Risks and Uncertainties" in the Company's most recent Annual Information Form available at http://www.sedar.com, as well as changes in general business and economic conditions, changes in interest and foreign currency rates, the supply and demand for, deliveries of and the level and volatility of prices of rough diamonds, costs of power and diesel, acts of foreign governments and the outcome of legal proceedings, inaccurate geological and recoverability assumptions (including with respect to the size, grade and recoverability of mineral reserves and resources), and unanticipated operational difficulties (including failure of plant, equipment or processes to operate in accordance with specifications or expectations, cost escalations, unavailability of materials and equipment, government action or delays in the receipt of government approvals, industrial disturbances or other job actions, adverse weather conditions, and unanticipated events relating to health safety and environmental matters).

Accordingly, readers are cautioned not to place undue reliance on these forward-looking statements which speak only as of the date the statements were made, and the Company does not assume any obligations to update or revise them to reflect new events or circumstances, except as required by law.

All currencies mentioned in this presentation are in United States Dollars ("US$") unless otherwise mentioned.
High operating margin (>60% LOM) sustained since production began in 2012

2.64 million carats sold, $1.49 billion in revenue in under 7 years

Total capital investment less than US$200 million; US$271 million in dividends paid since 2014

Innovative Design - First diamond mine to use state of the art XRT technology for primary diamond recovery

Consistent recovery of high value +10.8ct diamonds, with additional realized input from high value coloured diamonds (blue, pink)

Top of Class, only mine in recorded history to ever recover two +1,000 carat diamonds
Q3 2019 HIGHLIGHTS
(All currency figures in U.S. Dollars, unless otherwise stated)

Karowe Diamond Mine (100%)
Strong, stable operations for third consecutive quarter in 2019
Positive Underground Feasibility Study, Doubling the mine life
$31.06 operating cost per tonne of ore processed trending at the low end of guidance; Operating Margin 58%
$45.3 million quarterly revenue:
• 5 diamonds sold for >$1 million
• 1 diamond sold >$2 million
9.74 carat gem quality blue diamond and a 4.13 carat gem quality pink were recovered in September

Clara Diamond Solutions (100%)
Five sales successfully completed in Q3 2019;
14th sale commencing
Doubled number of sales and total value ($2.4 million) transacted in Q3 2019
Customer base grew 35% to 27 participants

Strong Balance Sheet & Dividend Policy Change
Quarterly dividend of CDN $0.025/ share paid Sept 19th
Decision to suspend quarterly dividend to focus on early works for underground development
Cash and cash equivalents of US$4.8 million and no long term debt
HISTORIC DIAMOND RECOVERIES

Lucara has become renowned as one of the world’s foremost producers of large, gem quality diamonds

Lesedi La Rona
1109 carat
Second largest gem diamond ever recovered in the world

Constellation
813 carat
Sold for a record $63.1 M USD
The 1,109 carat Lesedi La Rona was recovered in 2015 and purchased by Graff in 2017 for US$53 million resulting in the 302.37 carat Graff Lesedi La Rona;

Graded by the GIA, one of the world’s largest square emerald cut diamonds; 66 satellite diamonds were also cut ranging from <1 carat to >26 carats.

The 813 carat Constellation was recovered in 2015 and purchased for US$63 million, the highest price ever achieved for the sale of a rough diamond.

The resulting 313 carat Constellation One is the largest D coloured emerald cut diamond in the world today and is the largest ever graded by the GIA; 7 satellite diamonds were also cut with the largest being 102 carats.
Sewelô, an unbroken 1,758 carat near gem quality diamond recovered in April 2019; largest diamond from Karowe to date

One of the largest diamonds in the world and the largest for Botswana

A ‘kernel’ stone of clean white material with windows through the diamond, domain of measuring approx. 350-400ct

Analysis in Antwerp currently underway

Only mine in recorded history to recover two diamonds greater than 1,000 carats
Very Strong safety record
First Place Winner – Botswana Chamber of Mines Inter-Mines First Aid Competition

Mokubilo Farm Initiative
Community focused initiative to generate, broad based sustainable income

Phase 1: butternut, tomatoes, peppers and eggs

2018 Sustainability Report available on www.LucaraDiamond.com
Lucara’s Sustainability Report is prepared in accordance with the GRI Standards: Core option, and selected G4 Mining and Metals Sector Disclosures

In 2018, Lucara became a UN GC participant and contributes to 10 of the 17 UN SDGs

Lucara is certified by the Responsible Jewellery Council (RJC), compliant with Kimberley Process, and a member of Diamond Producers Association (DPA)
Total Clarity Report by Trucost examined 150 metrics across the DPA members which comprise approximately 75% of the world’s diamond production with global operations including Botswana, Russia, South Africa, Lesotho, Australia, Zimbabwe and Tanzania.

The report found that DPA members create US$16 billion in net socioeconomic and environmental benefits.

60% of the US$16 billion net benefit flows back into local communities.

The estimated CO2 associated with laboratory grown diamonds is nearly 3x greater than diamonds recovered by DPA members in 2016.

View the full report at total-clarity.com
Long term fundamentals strong but pricing environment in short to medium term is challenged, De Beers and Alrosa sales at lowest levels since 2017, mid-stream continues to struggle, polished demand weak

Note: Rough-diamond demand has been converted from polished-diamond demand using a historical ratio of rough to polished diamond values

Source: Bain & Company - Global Diamond Report 2018
A total of 313,189 carats were sold for gross revenue of $136.5 million, $436/carat

19 diamonds which sold for > $1 million, including 6 for > $3 million

115 carat sold for $3.66 million; 77 carat faint pink sold for $3.11 million; 2.24 carat blue stone sold for $347,222/carat; 241 carat sold for $8.1 million

Carats sold 22% higher yoy

2019 is the first full year for Blended Tenders resulting in a smoother revenue profile & decreased time to market for high value diamonds

609 Specials recovered, representing 6.1% weight percentage of total recovered carats including the 1,758 carat Sewelô, the largest stone recovered in the Karowe’s history; 24 stones > 100 carats
**CONSISTENT RECOVERY OF LARGE DIAMONDS**

Specials contribute ~70% by revenue and ~5% by volume

- Life of mine recovery of 152,000 carats of individual stones > 10.8ct (over 5,318 diamonds)
- Since 2012: 15 diamonds in excess of 300 carats have been recovered, 2 diamonds > 1,000ct
- Long term upside for diamond recoveries
- 10 diamonds sold for > USD$ 10 million each (not included in resource value modes)

**REVENUE AND PRODUCTION**

TRANSFORMING THE DIAMOND SALES PROCESS
Using Innovation and Technology

Opportunity to **disrupt** the existing supply chain, driving efficiencies and unlocking value

Rough diamonds are sold stone by stone based on polished demand

Diamond provenance is assured

Exclusive collaboration with Sarine Technologies fundamental to the platform
13 sales completed during 2019 with >$7 million of diamonds transacted through the platform

- Frequency of sales and number of participants increasing
- Manufacturers on the platform have grown from 4 to 28 customers
- Focus on growing supply and demand concurrently through adding third-party production to the platform and increasing the number of manufacturers/buyers invited to join
- Discussions are underway to add third party supply to the platform

>US$7 million diamonds sold by value
between one and four carats in size in better colours and qualities
KAROWE UNDERGROUND

Extending Mine-life to 2040

- UG development will **double the mine life** from original 2010 Feasibility Study
- Resource work completed since November 2017 identified a much **larger economic opportunity at depth**, on the basis of new drilling and open pit recoveries
- UG would add **~ US$4 billion in additional revenue**
- + US$200 million in revenue from ‘exceptional’ diamonds not included in economic analysis: potential for + US$500 million in additional revenue over proposed new LOM
Updated geological resource confirms increasing value with depth

Underground NI 43-101
Indicated resources of 35 million tonnes @ 15 cpht for 5.1 million carats
Diamond price of $725/carat (no escalation)
$3.7 billion in revenue

Long hole shrinkage selected as underground mining method (700-310 masl)
Provides access to higher value ore early
Payback period in granites lowers risk
Maintains current production rate of 7,200 tpd 2.6 Mt/annum

Strong Economics on both stand alone UG and OP+UG scenarios

**OP & UG Combined:**
NPV $945 million/$536 million (Pre/Post Tax @ 8%)
NPV $1,266 million/$718 million (pre/post tax@ 5%)
$2.2 billion / $1.2 billion Cash Flow (pre/post tax)
• An update to the mineral resource and geological model increased the extent of the Indicated resource of the high value South Lobe between 400 and 250 masl and increased the depth of South Lobe Inferred to 66masl (previously 250masl)
• Internal geology of south lobe is dominated by two domains EM/PK(S) and M/PK(S) - Size frequency and Value models have been established for each dominant domains
• 2019 Update utilised historical drilling and sampling data augmented by detailed logging, sampling and petrographic work on 33 new drillholes and 1,300 kilograms of additional microdiamond sampling (151 samples)

Mineral Resources are not Mineral Reserves and do not have demonstrated economic viability. All numbers have been rounded to reflect accuracy of the estimate. Mineral Resources are in-situ Mineral Resources and are inclusive of in-situ Mineral Reserves.; Mineral Resources are exclusive of all mine stockpile material.; Mineral Resources are quoted above a +1.25 mm bottom cut-off and have been factored to account for diamond losses within the smaller sieve classes expected within the current configuration of the Karowe process plant.; Inferred Mineral Resources are estimated on the basis of limited geological evidence and sampling, sufficient to imply but not verify geological grade and continuity. They have a lower level of confidence than that applied to an Indicated Mineral Resource and cannot be directly converted into a Mineral Reserve.; Average diamond value estimates are based on 2019 diamond sales data provided by Lucara Diamond Corp. Mineral Resources have been estimated with no allowance for mining dilution and mining recovery.
MINERAL RESOURCE UPDATE 2019
DIAMOND PRICING:
KAROWE UNDERGROUND MODEL

- $/ct models are a function of size frequency distribution a (SFD) and value per size class
- SFD models are constructed on very robust datasets, informed and reconciled by over 7 years of production
- Value based on actual sales: Lucara rough price book, sales data for single stones
- High value (+$10 million USD) single stones are excluded from generation of SFD and Value models
- Current Value models adjust for market downturn in high colour large goods
- 2014-2019 LOM average prices are weighted approximately 70:30 South: North/Centre
- 2019-2036 LOM average prices are weighted approximately 85:15 South: North/Centre

* Excludes Lesedi la Rona and Constellation
• Trade off assessed block cave, sub level cave, assisted block cave
• Geotechnical testing results did not support caving or caving with preconditioning
• Higher value ore lies deeper and is attributable to higher grade and value EM/PK(S)
• Long Hole Shrinkage (LHS) is planned to systematically drill and blast the entire South Lobe on a vertical retreat basis
• Mucking of swell and ultimate pull down of broken muck will take place from an extraction level at the 310 Level (310masl)

</table>

Activities listed for underground development and surface infrastructure require available financing and Lucara Board approval.
**NEXT STEPS**

- Based on the assumptions used for this evaluation, the project shows positive economics and should proceed to detailed engineering, financing and construction.
- In the first half of 2020, the Company will focus on detailed engineering and early procurement initiatives.
- The Company will also be reviewing financing options and will update the market when such decisions are reached.
- The anticipated capital requirements in 2020 represent less than 10% of the initial capex estimate for the underground project. The Company’s anticipates funding initial expenses from cash flow, as financing options are explored.
CONCLUSIONS

Lucara is a premier, mid-tier, investible diamond company, positioned for long term, sustainable growth

- High margin diamond producer
- Botswana - a low risk jurisdiction
- Strong balance sheet
- Open pit mineable reserves to 2026, Underground reserves will double the mine life to 2040
- Asset diversification and additional revenue stream through Clara
